

CLAIM AMENDMENTS

1. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a housing of a palm-held size;

a cellphone provided in said housing, said cellphone adapted ~~and having means~~ for selectively and wirelessly connecting to the Internet or remotely located telephones and adapted ~~having at least one separate switch~~ means for controlling selection of downloading data or uploading data ~~to or from~~ or to the Internet or downloading data to a computer or other electronic device and said cellphone having at least one of (1) voice controlled dialing, (2) a speaker phone, (3) a wireless earphone with a microphone or (4) a wire connection jack earphone with a microphone for hands-free operation of the cellphone;

a memory operatively connected to said cellphone;

a microprocessor ~~provided in said cellphone and~~ operatively connected to said memory;

~~a battery mounted in said housing and operatively connected to and supplying power for operating said cellphone and memory and microprocessor;~~

said microprocessor ~~including means~~ adapted for storing data to said memory that is received from the Internet or a remotely located telephone when said cellphone is wirelessly connected to the Internet or ~~a~~ the remotely located telephone; and

a display panel ~~means provided with said housing and~~ operatively connected to said microprocessor, said display panel adapted for reproducing images or other data from at least one of said memory or the Internet, ~~said means for reproducing data includes a display panel for displaying images and data; and, said data including sounds and at least one of moving images or combined sounds and moving images.~~

2. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a housing of a palm-held size;

a cellphone provided in said housing, said cellphone adapted ~~and having means~~ for selectively and wirelessly accessing to the Internet or remotely located telephones and adapted ~~having at least one separate switch means~~ for controlling selection of downloading data or uploading data ~~to or from~~ or to the Internet or down loading data to a computer or other electronic device and said cellphone having at least one of (1) voice controlled dialing, (2) a speaker phone, (3) a wireless earphone with a microphone or (4) a wire connection jack earphone with a microphone for hands-free operation of the cellphone;

a memory operatively connected to said cellphone;

a microprocessor ~~provided in said cellphone and~~ operatively connected to said memory;

~~a battery mounted in said housing and operatively connected to and supplying power for operating said cellphone and memory and microprocessor;~~

said microprocessor ~~including means~~ adapted for causing data stored in said memory or received by said cellphone to be transmitted by said cellphone to the Internet or a remotely located telephone when said cellphone is connected to the Internet or to said remotely located telephone, respectively; and

~~means a display panel provided with said housing and operatively connected to said microprocessor, said display panel adapted for reproducing images or other data from at least one of said memory or the Internet, said means for reproducing data includes a display panel for displaying images and data; and, said data including sounds and at least one of moving images or combined sounds and moving images.~~

3. (Currently Amended) The device of claim 1 or 2 further comprising
~~, wherein said means~~ a speaker operatively coupled to the microprocessor for reproducing sounds from said memory or the internet data includes a speaker means for reproducing sounds.

4. (Previously Presented) The device of claim 1 or 2, wherein said memory includes an audio recorder in said housing for recording sounds within a range of said housing.

5. (Currently Amended) The device of claim 1 or 2, further including

a camera provided in said housing and connected to said microprocessor ~~and battery~~ for capturing images in view of said housing.

6. (Original) The device of claim 5, wherein said camera is a night vision camera.

7. (Original) The device of claim 1 or 2, further including a wireless remote earphone for the cellphone.

8. (Original) The device of claim 7, wherein said wireless remote earphone includes a microphone.

9. (Original) The device of claim 1 or 2, wherein said cellphone is a satellite phone.

10. (Previously Presented) The device of claim 1 or 2, wherein said data comprises sounds, images, words and emails.

11. (Currently Amended) The device of claim 1 or 2, wherein said housing includes a socket, and said memory includes a replaceable memory card receivable in a said socket in said housing.

12. (Currently Amended) The device of claim 11, wherein said socket is adapted~~provided with means~~ for accepting said-replaceable memory cards of different memory capacities.

13. (Original) The device of claim 1 or 2, further including an earphone jack connected to said microprocessor for receiving a wire plug from an earphone set comprising a speaker and a microphone.

14. (Currently Amended) The device of claim 1 or 2, wherein said cellphone includes means a volume adjustment for adjusting the volume of a speaker of said cellphone.

15. (Currently Amended) The device of claim 1 or 2, ~~wherein~~ further comprising a jack is provided in said housing and connected to said microprocessor for selective hardwire connection of said microprocessor to a computer or other device for downloading and uploading the data between said computer or other device and said cellphone memory.

16-17. (Cancelled)

18. (Currently Amended) The mobile entertainment and communication device of claim ~~1, 2 or 17~~ 1 or 2, further including

a global positioning system provided in said housing and operatively connected to said cellphone ~~and battery~~, said cellphone having at least one of (1) a voice controlled dialing of a specific remotely located telephone number or (2) an emergency call button for dialing said specific remotely located telephone number and thereby also activating said global positioning system for transmitting images or the position of said cellphone to said specific remotely located telephone.

19. (Currently Amended) The mobile entertainment and communication device of claim ~~16 or~~ 18, wherein said specific remotely located telephone number is "911".

20. (Currently Amended) The mobile entertainment and communication device of claim ~~16, 17 or~~ 18, wherein said cellphone ~~has means~~ is adapted for voice controlled dialing of said cellphone to a plurality of remotely located telephones.

21. (Currently Amended) The mobile entertainment and communication device of claim ~~16 or 17~~ 18, further including a wireless remote microphone and earpiece speaker ~~having means~~ for operably communicating with said cellphone.

22. (Currently Amended) The mobile entertainment and communication device of claim ~~16 or 17~~ 18, further comprising:

a camera in said housing operable for capturing continuing images within a range of said housing; and

said camera operatively connected to said cellphone, ~~said battery~~ and said memory for selectively storing said continuing images captured by said camera.

23. (Currently Amended) The mobile entertainment and communication device of claim ~~16 or 17~~ 18, further comprising a replaceable memory card socket provided in said cellphone housing for selectively receiving a replaceable memory card; and

said memory card socket operatively connected to ~~said battery~~, said cellphone, and said memory.

24. (Currently Amended) A mobile entertainment and communication device for communicating with remotely located telephones, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being handheld by a person and adapted for placing and receiving person-to-person telephone calls to and from remotely located telephones;

said cellphone having a microphone, a speaker, and a memory; and

a jack connection on said housing for a wired connection between the cellphone and a separate device for at least one of downloading or uploading data therebetween including at least one of moving images, ~~sounds~~ or combined sounds and moving images.

25. (Previously Presented) The mobile entertainment and communication device of claim 24, wherein said separate device is at least one of a computer or a television.

26. (Previously Presented) The mobile entertainment and communication device of claim 24 or 25, further comprising a second jack connection on said housing for a wired connection between the cellphone and a microphone/speaker combination for hands-free speaking and listening on the cellphone.

27. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being handheld by a person and adapted for placing and receiving person-to-person telephone calls to and from remotely located telephones, said cellphone having a microphone and a speaker;

an audible alarm ~~means~~ including at least one of said speaker or a separate audible sound generator; ~~and~~

an emergency button on said housing and operatively connected to said audible alarm ~~means~~ for selectively operating said audible alarm ~~means~~ in an emergency;

a camera in said housing operable for capturing images within a range of said housing; and

said camera operatively connected to said emergency button for recording images captured by said camera upon actuating of said emergency button.

28. (Currently Amended) The mobile entertainment and communication device of claim 27, further comprising ~~a means~~ an automatic dialer for automatically dialing at least one of "911" or other emergency telephone numbers.

29. (Currently Amended) The mobile entertainment and communication device of claim 28, wherein said ~~means for automatically dialing a telephone number~~ automatic dialer includes said emergency button.

30. (Currently Amended) The mobile entertainment and communication device of claim 28, wherein said ~~means~~ automatic dialer for automatically dialing a

telephone number ~~comprises means~~ is separately operable from said emergency button.

31. (Previously Presented) The mobile entertainment and communication device of claim 28, further including a global positioning system provided in said housing and operatively connected to said cellphone, said emergency button also activating said global positioning system for transmitting the position of said cellphone to at least one of the emergency telephone numbers.

32. (Cancelled)

33. (Currently Amended) A mobile entertainment and communication device for communicating with remotely located telephones, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being handheld by a person and adapted for placing and receiving person-to-person telephone calls to and from remotely located telephones and accessing the Internet, said cellphone having a microphone and a speaker;

a camera in said housing operable for capturing still images and continuing images within a range of said housing;

a memory in said housing ~~operably~~ operatively connected to said microphone for storing sounds within a range of said microphone and for storing said images captured by said camera;

separate switches for separately operating said microphone for capturing sounds and said camera for capturing said still or continuing images; and

~~means provided with~~ said cellphone adapted for reproducing and uploading to the Internet at least one of continuing images or combined sounds and continuing images.

34. (Currently Amended) ~~The mobile entertainment and communication device of claim 33~~ A mobile entertainment and communication device for communicating with remotely located telephones, comprising:

a cellphone having a portable housing of a size and weight for being handheld by a person and adapted for placing and receiving person-to-person telephone calls to and from remotely located telephones, said cellphone having a microphone and a speaker;

a camera in said housing operable for capturing still images and continuing images within a range of said housing;

a memory in said housing operatively connected to said microphone for storing sounds within a range of said microphone and for storing said images captured by said camera;

separate switches for separately operating said microphone for capturing sounds and said camera for capturing said still or continuing images; and

said cellphone adapted for reproducing at least one of continuing images or combined sounds and continuing images, wherein said separate switches includes

~~means~~ are adapted for simultaneously operating said camera for capturing continuing images and operating said microphone for capturing sounds with the continuing images.

35. (Previously Presented) The mobile entertainment and communication device of claim 33 or 34, wherein said captured images and sounds are stored on said memory.

36. (Previously Presented) The mobile entertainment and communication device of claim 33 or 34, wherein said captured images and sounds are transmitted simultaneously by said cellphone to a remotely located telephone while being captured.

37. (Previously Presented) The mobile entertainment and communication device of claim 33 or 34, wherein said memory includes a replaceable memory card receivable in a socket in said housing.

38. (Cancelled)

39. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being handheld by a person and adapted for wirelessly accessing the Internet or placing and receiving person-to-person telephone calls to and from remotely located telephones, said cellphone having a microprocessor, a microphone, a speaker and a display;

a camera in said housing and operable to capture still images and real time continuing images within a range of said housing;

~~means in said housing and operable~~ the microphone operable for capturing sounds within a range of said housing;

a memory operatively connected to said cellphone, said camera and said ~~means~~ microprocessor ~~for capturing sounds~~ for storing at least one of the images captured by said camera, the sounds captured by said microphone, images or sounds received from the remotely located telephone, or data received from the Internet;

~~a battery in the housing for supplying electrical power to said cellphone, camera, memory and means for capturing sounds;~~

~~means for activating~~ said cellphone adapted for wirelessly communicating with a remotely located telephone or the Internet and, when said cellphone and the remotely located telephone or Internet are telephonically connected, then either (1) causing at least one of the currently captured images or sounds, the stored images or sounds or the stored Internet data to be transmitted by said cellphone to the remotely located telephone or the Internet or (2) causing said cellphone to receive and to at least one of record in the memory or supply to the speaker or display the sounds or images from the remotely located telephone or data from the Internet, ~~said means for activating~~ including;

at least one separate switch for ~~causing~~ activating said recording, transmitting or receiving;

said Internet data including at least one of still images, moving images, sounds, words, text or audio-visual performances, including the combined sounds and images of such performances;

~~means in said housing~~ the speaker and the display adapted for playing the stored sounds or displaying the stored images from said memory;

a global positioning system provided in said housing and connected to said ~~battery and~~ cellphone for transmitting in real time images or the position of said cellphone to a remotely located telephone or the Internet when said cellphone is telephonically connected to the remotely located telephone or the Internet ;

~~means for causing operation of at least one of~~ said cellphone activating said camera or said microphone upon activation of said global positioning system for also transmitting at least one of images and sounds with or without said real time position to the remotely located telephone or the Internet; and

a jack on said housing for a wired connection between said cellphone and at least one of a computer, a radio, a television or CD, DVD, VCR, tape or phonograph record player for at least one of downloading or uploading sounds or images therebetween.

40. (Currently Amended) The mobile entertainment and communication device of claim ~~38~~ or 39, further including a motion detector in said housing operable to detect movement and then cause said cellphone to dial a pre-selected telephone number.

41. (Previously Presented) The mobile entertainment and communication device of claim 40, wherein said motion detector detects movement of said housing.

42. (Currently Amended) The mobile entertainment and communication device of claim ~~38~~ or 39, further including a sound detector in said housing operable to detect a sound and then cause said cellphone to dial a pre-selected telephone number.

43. (Currently Amended) The mobile entertainment and communication device of claim ~~38~~ or 39, further including an acceleration sensor in said housing operable to detect acceleration and deceleration for causing said cellphone to dial a pre-selected telephone number.

44. (Currently Amended) The mobile entertainment and communication device of claim ~~38~~ or 39, further including a light sensor in said housing operable to detect a change in light for causing said cellphone to dial a pre-selected telephone number.

45. (Currently Amended) The mobile entertainment and communication device of claim ~~38~~ or 39, further comprising a replaceable memory card socket provided in said cellphone housing for selectively receiving a replaceable memory card; and

said memory card socket operatively connected to ~~said battery~~, said cellphone, and said memory.

46. (Previously Presented) A mobile entertainment and communication device for communicating with remotely located telephones, comprising:

a cellphone in a portable housing of a size and weight for being handheld by a person for placing and receiving person-to-person telephone calls to and from remotely located telephones;

said cellphone having a microphone, a speaker, a camera and a memory for storing sounds and images; and

a sensor in said housing for activating at least one of said microphone or said camera upon sensing an activating characteristic and then causing said memory to record at least one of the sounds received by said microphone or images captured by said camera.

47. (Previously Presented) The mobile entertainment and communication device of claim 46, wherein said sensor detects at least one of motion, sound, light, infrared, images, acceleration, deceleration, heat, smoke, carbon monoxide or poisonous gas as the activating characteristic.

48. (Currently Amended) The mobile entertainment and communication device of claim 46 or 47, further comprising a replaceable memory card socket provided in said cellphone housing for selectively receiving a replaceable memory card; and

said memory card socket operatively connected to ~~said battery~~, said cellphone, said microphone, said speaker, said camera and said memory.

49. (Currently Amended) A mobile entertainment and communication device for communicating with remotely located telephones, comprising:

a cellphone in a portable housing of a size and weight for being handheld by a person for placing and receiving person-to-person telephone calls to and from remotely located telephones;

said cellphone having a microphone, a speaker, a camera and a memory for storing sounds and images; and

a sensor in said housing for activating at least one of said microphone or said camera upon sensing an activating characteristic and then causing said cellphone to dial a pre-selected telephone number of a remotely located telephone and, when said cellphone and the remotely located telephone are telephonically connected, transmitting the sounds received by said microphone or images captured by said camera to that remotely located telephone, wherein said sensor detects at least one of motion, sound, light, infrared, images, acceleration, deceleration, sound, heat, smoke, carbon monoxide or poisonous gas as the activating characteristic.

50. (Canceled)

51. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being handheld by a person and adapted for placing and receiving person-to-person telephone calls to and from remotely located telephones;

said cellphone having a microprocessor, microphone, a speaker, a camera and a memory for storing sounds and images, said microphone, speaker, camera and memory operably operatively connected to a said microprocessor; and

a light sensor in said housing for detecting low ambient light levels, said light sensor operatively connected to said microprocessor.

52. (Previously Presented) The mobile entertainment and communication device of claim 51, wherein said camera includes a video camera and a night vision camera, said microprocessor causing operation of said night vision camera when said light sensor senses a very low ambient light level and said camera is operated.

53. (Currently Amended) The mobile entertainment and communication device of claim 51 or 52, further comprising a replaceable memory card socket provided in said cellphone housing for selectively receiving a replaceable memory card; and

said memory card socket operatively connected to ~~said battery~~, said cellphone, said microphone, said speaker, said camera and said memory.

54. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a cellphone in a portable housing of a size and weight for being handheld by a person for placing and receiving person-to-person telephone calls to and from remotely located telephones and accessing the Internet, said cellphone having a microphone and a speaker;

a camera in said housing operable for capturing images within a range of said housing;

a memory in said housing ~~operably~~ operatively connected to said microphone for storing sounds within a range of said microphone and for storing images from said camera;

a light sensor in said housing for detecting low ambient light levels;

at least one separate switch provided in said housing for separately operating said microphone for capturing sounds or said camera for capturing still images or moving images; and

a microprocessor in said housing and operably connected to said microphone, said speaker, said camera, said memory, said light sensor and said at least one separate switch, wherein said at least one separate switch is adapted for simultaneously operating said camera for capturing continuing images and operating said microphone for capturing sounds with the continuing images.

55. (Cancelled)

56. (Previously Presented) The mobile entertainment and communication device of claim 54, wherein said camera includes a video camera and a night vision camera, said microprocessor causing operation of said night vision camera when said light sensor senses a very low ambient light level.

57. (Previously Presented) The mobile entertainment and communication device of claim 54 or 56, wherein said captured images and sounds are transmitted simultaneously by said cellphone to a remotely located telephone while being captured.

58. (Previously Presented) The mobile entertainment and communication device of claim 54, wherein said memory includes a replaceable memory card receivable in a socket in said housing.

59. (Currently Amended) A mobile entertainment and communication device for communicating with remotely located telephones, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being handheld by a person and adapted for placing and receiving person-to-person telephone calls to and from remotely located telephones;

said cellphone having a microphone, a speaker, a camera and a memory for storing sounds and images;

a light sensor in said housing for detecting low ambient light levels for camera operation;

a global positioning system provided in said housing for transmitting the real time position of said cellphone to a remotely located telephone when said cellphone is telephonically connected to the remotely located telephone, said global positioning system being activated by at least one of (1) voice controlled dialing of an emergency

service number, (2) dialing an emergency service number, or (3) an emergency button that dials an emergency service number;

~~means for causing operation of at least one of~~ said cellphone activating said camera or said microphone upon activation of said global positioning system for also transmitting at least one of sounds, still images or moving images with said real time position to the remotely located telephone;

a microprocessor in said cellphone and operably connected to said light sensor and global positioning system;

~~a battery in the housing for supplying electrical power to said cellphone, said light sensor, said global positioning system and said microprocessor;~~

at least one of (1) a jack connection on said housing for a wired connection between said cellphone and an earpiece speaker and a separate microphone or (2) a wireless earpiece and microphone, for hands-free use of said cellphone;

~~means for~~ said microprocessor selectively operating at least one of said camera for capturing continuing images or said microphone for capturing sounds, said captured images or sounds being stored on said memory or transmitted to a remotely located telephone when the cellphone and the remotely located telephone are telephonically connected; and

~~means in said housing for~~ said microprocessor displaying images or emitting sounds stored on said memory or received from a remotely located telephone when said cellphone and the remotely located telephone are telephonically connected;

a sound detector in said housing operable to detect a sound and then cause said cellphone to dial a pre-selected telephone number.

60. (Currently Amended) A mobile entertainment and communicating device for communicating with the Internet and remotely located telephones, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being handheld by a person and adapted for wirelessly accessing the Internet or placing and receiving person-to-person telephone calls to and from remotely located telephones, said cellphone having a microphone, a speaker, a memory card socket and a display;

a camera in said housing and operable to capture still and real time continuing images within a range of said housing;

a microphone in said housing operable for capturing sounds within a range of said housing;

a memory including a replaceable memory card receivable in the socket in said housing and operatively connected to said cellphone, said camera and said microphone for selectively storing at least one of images captured by said camera, sounds captured by said microphone, images or sounds received from the remotely located telephone, or data received from the Internet;

a global positioning system provided in said housing and connected to said battery and cellphone for transmitting the position of said cellphone to a remotely located telephone when said cellphone is telephonically connected to the remotely located telephone, ~~said global positioning system being activated by at least one of (1) voice controlled dialing of an emergency service number, (2) dialing an emergency service number, or (3) an emergency button that dials an emergency service number;~~

~~a battery in the housing for supplying electrical power to said cellphone, camera, memory, global positioning system means for capturing sounds;~~

~~means~~ a control switch for activating said cellphone for wirelessly communicating with a remotely located telephone or the Internet and, when said cellphone and the remotely located telephone or Internet are telephonically connected, then either (1) causing at least one of the currently captured images or sounds, the stored images or sounds or the stored Internet data to be transmitted by said cellphone to the remotely located telephone or the Internet or (2) causing said cellphone to receive and to at least one of record in the memory or supply to the speaker and display the sounds or images from the remotely located telephone or data from the Internet;

said Internet data including at least one of still images, moving images, sounds, words, text or audio-visual performances, including the combined sounds and images of such performances;

~~means in said housing~~ the speaker and the display adapted for playing the stored sounds or displaying the stored images from said memory; ~~a jack connection on said housing for a wired connection between said cellphone and at least one of a computer, a radio, a television or CD, DVD, VCR, tape recorder or phonograph record player for at least one of downloading or uploading sounds or images therebetween.~~

61. (Previously Presented) The mobile entertainment and communication device of claim 59 or 60, further including a motion detector in said housing operable to detect movement and then cause said cellphone to dial a pre-selected telephone number.

62. (Currently Amended) The mobile entertainment and communication device of claim 59 or 60, further including a sound detector in said housing operable to detect a sound and then cause said cellphone to dial a pre-selected telephone number.

63. (Previously Presented) The mobile entertainment and communication device of claim 59 or 60, further including an acceleration sensor in said housing operable to detect acceleration and deceleration for causing said cellphone to dial a pre-selected telephone number.

64. (Currently Amended) A mobile entertainment and communication device for communicating with remotely located telephones, comprising:

a housing of a palm-held size;

a cellphone provided in said housing and ~~having means~~ adapted for selectively and wirelessly connecting to the remotely located telephones, said cellphone having a microphone, a speaker, a memory, a microprocessor, a display, a wired or wireless earphone, and ~~means~~ said cellphone further adapted for reproducing data;

a jack provided in said housing and operatively connected to said microprocessor for uploading data or downloading data between said cellphone and a computer and other devices;

said data including at least one of still images, moving images, sounds, words, text or audio-visual performances, including the combined sounds and images of such performances; and

~~means~~ the microprocessor provided in said housing for starting the playing of and causing at least one of skipping portions of sounds, equalizing sounds or balancing sounds of said reproduced data.

65. (Currently Amended) A mobile entertainment and communication device for communicating with remotely located telephones, comprising:

a housing of a palm-held size including a memory card socket;

a cellphone provided in said housing and ~~having means~~ adapted for selectively and wirelessly accessing the remotely located telephones;

said cellphone having a microphone, a speaker, a memory and a microprocessor provided in said housing, said memory including a replaceable memory card receivable in the socket;

a jack provided in said housing and operatively connected to said microprocessor for uploading data or downloading data between said cellphone and a computer or other devices; and

at least one of (1) an earphone and microphone with a wire for connecting to a jack in the housing of said cellphone, (2) a wireless earphone and microphone separate from said housing for transmitting sounds to and from said cellphone, (3) a speaker phone, or (4) ~~a means for~~ voice controlled dialing, each for hands-free cellphone operation.

66. (Currently Amended) The device of claim 1, 2, ~~16, 17~~, 24, 27, 33, ~~38~~, 39, 46, 49, 51, 54, 59, 60 or 65, wherein said cellphone further ~~including~~includes a display, and ~~means~~ said cellphone is adapted for reproducing data, said data including at least one of still images, moving images, sounds, words, text or audio-visual performances, including the combined sounds and images of such performances; and ~~means provided in said housing~~ for starting the playing of and causing at least one of skipping portions, equalizing sounds or balancing sounds of said reproduced data.

67. (Currently Amended) The device of claim 24, 27, 33, ~~38~~, 39, 46, 49, 51, 54, 59, 60 or 64, further including a wireless remote earphone and microphone for the cellphone that is separate from the cellphone.

68. (Currently Amended) The device of claim 64 ~~or 65~~, wherein the housing includes a memory card socket, and said memory includes a replaceable memory card receivable in a said socket in said housing.

69. (Currently Amended) The device of claim 65 or 68, wherein said socket is ~~provided with means adapted~~ for accepting ~~said~~ replaceable memory cards of different memory capacities.

70. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being handheld by a person and adapted for wirelessly accessing the Internet or placing and receiving person-to-person telephone calls to and from remotely located telephones, said cellphone having a microphone, a speaker, a camera and a memory for storing sounds captured by the microphone and still and moving images captured by the camera;

said memory including a replaceable memory card receivable in a socket in said housing and with either prerecorded data or no data on said replaceable memory card;

~~means for activating~~ a microprocessor for controlling said cellphone for wirelessly communicating with at least one of the Internet or the remotely located telephone and

(1) causing at least one of the sounds captured by the microphone or the moving images captured by the camera to be transmitted to at least one of the remotely located telephone or the Internet or (2) causing at least one of sounds or images to be received by said cellphone from at least one of the remotely located telephone or the Internet;

said cellphone having a display for displaying at least one of (1) said moving images captured by the camera, (2) moving images stored in the memory, including the replaceable memory card, or (3) moving images received from the remotely located telephone or the Internet and being capable of playing music with or without moving images;

~~at least one of a music player, with or without moving images, or a radio provided in said portable housing for providing entertainment; and~~

at least one of (1) an earphone and microphone with a wire for connecting to a jack on said cellphone or (2) a wireless earphone and microphone separate from said cellphone housing for transmitting sounds to and receiving sounds from said cellphone, each said earphone usable for receiving sounds from the remotely located telephone and at least one of the Internet, ~~the~~ a music player, ~~the~~ a radio or the memory, including the replaceable memory card.

71. (Currently Amended) The mobile entertainment and communication device of claim 70, wherein said ~~means for activating said cellphone for wirelessly communicating with at least one of the Internet or the remotely located telephone is~~

~~operable for causing~~ said microprocessor controlling each of (1) at least one of the sounds captured by the microphone or the moving images captured by the camera to be transmitted to at least one of the remotely located telephone or the Internet and (2) at least one of sounds or images to be received by said cellphone from at least one of the remotely located telephone or the Internet.

72. (Previously Presented) The mobile entertainment and communication device of claim 70 or 71, wherein said cellphone display is operable for displaying each of (1) said images captured by the camera, (2) images stored in the memory, including the replaceable memory card, and (3) images received from the remotely located telephone or the Internet.

73. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being handheld by a person and adapted for wirelessly accessing the Internet or placing and receiving person-to-person telephone calls to and from remotely located telephones, said cellphone having a microphone, a speaker and a memory for storing sounds ~~captured by the microphone~~ including a memory card socket in the portable housing;

said memory including a replaceable memory card directly receivable in a said socket in said housing and with either prerecorded data or no data on said replaceable memory card, the memory card having a shape exhibiting asymmetry for causing proper

orientation of said memory card in the socket and an engagement feature for use in securing the memory card in the socket;

means a control switch and a microprocessor for activating said cellphone for wirelessly communicating with at least one of the Internet or the remotely located telephone and causing at least one of (1) transmitting the sounds captured by the microphone to at least one of the remotely located telephone or the Internet or (2) receiving the sounds by said cellphone from at least one of the remotely located telephone or the Internet and being capable of playing music;

~~at least one of a music player with or without moving images or a radio provided in said portable housing for providing entertainment; and~~

at least one of (1) an earphone and microphone with a wire for connecting to a jack on said cellphone or (2) a wireless earphone and microphone separate from said cellphone housing for transmitting sounds to and receiving sounds from said cellphone, each said earphone usable for receiving sounds from the remotely located telephone and at least one of the Internet or the memory, including the replaceable memory card.

74. (Currently Amended) The mobile entertainment and communication device of claim 73, wherein said ~~means for activating~~ control switch and microprocessor ~~is~~ are operable for causing each of (1) transmitting the sounds captured by the microphone to at least one of the remotely located telephone or the Internet or (2) receiving the sounds by said cellphone from at least one of the remotely located telephone or the Internet.

75. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being handheld by a person and adapted for wirelessly accessing the Internet or placing and receiving person-to-person telephone calls to and from remotely located telephones, said cellphone having a microphone, a memory for storing data and an audio recorder provided in the cellphone for recording sounds without a phone call, the recorded sounds being downloadable to at least one of a computer, television or other electronic device, said housing including a memory card socket;

said memory including a replaceable memory card receivable in a said socket in said housing and with either prerecorded data or no data on said replaceable memory card;

~~means for activating said cellphone and operable for causing~~ a microprocessor controlling at least one of (1) wirelessly transmitting and receiving data to and from a remotely located telephone, (2) uploading or downloading data to and from the Internet, (3) reproducing data from said memory, including said replaceable memory card, or (4) reproducing data currently being received by said cellphone;

said reproducing data including at least one of moving images or combined sounds and moving images; and

at least one of (1) an earphone and microphone with a wire for connecting to a jack on said cellphone or (2) a wireless earphone and microphone separate from said cellphone housing for transmitting sounds to and receiving sounds from said cellphone, each said earphone usable for receiving sounds from the remotely located telephone and at least one of a radio, a music player, the Internet or the memory, including the replaceable memory card.

76. (Currently Amended) The mobile entertainment and communications device of claim 75, wherein said ~~means for activating is~~ cellphone includes a microprocessor operable for causing at least two of the four functions of (1) wirelessly transmitting and receiving data to and from a remotely located telephone, (2) uploading or downloading data to and from the Internet, (3) reproducing data from said memory, including said replaceable memory card, or (4) reproducing data currently being received by said cellphone.

77. (Currently Amended) The mobile entertainment and communications device of claim 76, wherein said ~~means for activating is~~ cellphone includes a microprocessor operable for causing at least three of the four functions of (1) wirelessly transmitting and receiving data to and from a remotely located telephone, (2) uploading or downloading data to and from the Internet, (3) reproducing data from said memory, including said replaceable memory card, or (4) reproducing data currently being received by said cellphone.

78. (Currently Amended) The mobile entertainment and communications device of claim 75, wherein, said ~~means for activating is~~ cellphone includes a microprocessor operable for causing each of the four functions of (1) wirelessly transmitting and receiving data to and from a remotely located telephone, (2) uploading or downloading data to and from the Internet, (3) reproducing data from said memory, including said replaceable memory card, and (4) reproducing data currently being received by said cellphone.

79. (Canceled)

80. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and a remotely located telephone, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being handheld by a person for wirelessly placing and receiving person-to-person telephone calls to and from remotely located telephones, said cellphone having a microphone, a speaker, a microprocessor, a memory for storing sounds and an audio recorder provided in the cellphone for recording sounds without a phone call, the recorded sounds being downloadable to at least one of a computer, television or other electronic device;

~~at least one of a music player or a radio provided in said portable housing for providing audio entertainment;~~

~~control means~~ said microprocessor controlling ~~provided in said housing and operably connected to at least one of said music player or said radio for causing the~~

playing of sound and at least one of controlling sound volume, skipping portions of sounds, equalizing sounds or balancing sounds; and

at least one of (1) an earphone and microphone with a wire for connecting to a jack on said cellphone or (2) a wireless earphone and microphone separate from said cellphone housing for transmitting sounds to and receiving sounds from said cellphone, each said earphone usable for receiving sounds from the remotely located telephone and at least one of the Internet, ~~the~~ a music player, ~~the~~ a radio or the memory.

81-82. (Canceled)

83. (Currently Amended) The mobile entertainment and communication device of claim 82 80, wherein said housing includes a memory card socket, said memory includes a replaceable memory card receivable in a said socket in said housing, and said replaceable memory card ~~having~~ has prerecorded music playable by said ~~music~~ player cellphone.

84. (Canceled)

85. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a housing of a palm-held size including a memory card socket;

a cellphone provided in said housing and ~~having means~~ adapted for selectively and wirelessly connecting to the Internet or remotely located telephones, a display and a speaker;

a memory operatively connected to said cellphone and including a replaceable memory card directly receivable in a said socket in said housing, said replaceable memory card having either prerecorded data or no data;

a microprocessor provided in said cellphone and operatively connected to said memory;

said microprocessor ~~including means~~ adapted for storing data to said memory that is received from at least one of the Internet or a remotely located telephone when said cellphone is wirelessly connected to the Internet or a remotely located telephone;

~~means provided with said housing and~~ said display and said speaker operatively connected to said microprocessor for reproducing data from at least one of said cellphone, memory or the Internet, said data including at least one of still images, moving images, sounds, words, text or audio-visual performances, including the combined sounds and images of such performances, wherein said combined sound and moving images reproduced at said housing includes visual entertainment;

a global positioning system provided in said housing and operatively connected to said microprocessor;

said cellphone having ~~means a~~ dialer for dialing a remotely located telephone or the Internet and a control for activating said global positioning system for transmitting the position of said cellphone to the remotely located telephone or the Internet;

at least one of (1) a jack connection on said housing for a wired connection between said cellphone and said speaker as an earpiece speaker and a separate microphone, (2) said speaker as a wireless earphone and microphone separate from said cellphone housing, (3) ~~means for~~ said speaker as a speaker phone operation, or (4) ~~means for~~ voice controlled dialing, each for hands-free cellphone operations;

~~at least one of a music player, with or without playing moving images, or a radio provided in said portable housing for providing entertainment; and~~

~~control means provided in said housing for causing~~ said microprocessor controlling at least one of sound play, controlling sound volume, skipping portions of sounds, equalizing sounds or balancing sounds provided by said at least one of said a music player ~~and~~ or a radio.

86. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a housing of a palm-held size including a memory card socket;

a cellphone provided in said housing and ~~having means~~ adapted for selectively and wirelessly connecting to the Internet or remotely located telephones;

a memory operatively connected to said cellphone and including a replaceable memory card receivable in a said ~~socket in said housing~~, said replaceable memory card having either prerecorded data or no data;

a microprocessor provided in said cellphone and operatively connected to said memory;

said microprocessor ~~including means for~~ controlling storing data to said memory that is received from at least one of the Internet or a remotely located telephone when said cellphone is wirelessly connected to the Internet or a remotely located telephone;

~~means~~ a control switch provided with said housing and operatively connected to said microprocessor for reproducing data from at least one of said cellphone, memory or the Internet, said ~~reproducing of~~ data including at least one of moving images or combined sound and moving images, wherein said combined sound and moving images reproduced at said housing includes visual entertainment;

a global positioning system provided in said housing and operatively connected to said microprocessor;

said cellphone ~~having means~~ adapted for dialing a remotely located telephone or the Internet and activating said global positioning system for transmitting the position of said cellphone to the remotely located telephone or the Internet;

~~at least one of a music player, with or without playing moving images, or a radio provided in said portable housing for providing entertainment; and~~

~~control means provided in said housing for causing~~ said microprocessor controlling the playing of sound and at least one of controlling sound volume, skipping

portions of sounds, equalizing sounds or balancing sounds provided by said at least one of said a music player and a radio.

87.(Canceled)

88. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being handheld by a person and adapted for connecting to the Internet and for placing and receiving person-to-person telephone calls to and from remotely located telephones, said cellphone having a microphone, a speaker, a memory card socket in said housing and a memory, said memory including a replaceable memory card receivable in a said socket in said housing;

~~at least one of a music player with or without moving images or a radio provided in said housing for providing entertainment;~~

at least one of (1) an earphone and microphone with a wire for connecting to a jack on said cellphone or (2) a wireless earphone and microphone separate from said cellphone housing for transmitting sounds to and receiving sounds from said cellphone, each said earphone usable for receiving sounds from the remotely located telephone and at least one of the Internet, ~~the~~ a music player, ~~the~~ a radio or the memory, including the replaceable memory card;

~~control means provided in said housing for causing~~ at least one control switch
causing the playing of sound and at least one of controlling sound volume, skipping
portions of sounds, equalizing sounds or balancing sounds provided to at least one of
said cellphone speaker or each said earphone; and

~~means~~ a display and a speaker provided in said housing for reproducing at least
one of moving images or combined sounds and moving images from at least one of the
Internet or the memory, including the replaceable memory card.

89. (Previously Presented) The mobile entertainment and communication
device of claim 88, further including a jack connection on said housing for a wired
connection between said cellphone and a separate device for downloading or uploading
data therebetween, said separate device is at least one of a computer or a television.

90-92. (Cancelled)

93. (Currently Amended) A mobile entertainment and communication device for
communicating with the Internet and remotely located telephones, comprising:

a housing of a palm-held size;

a cellphone provided in said housing and ~~having means for~~ adapted for
selectively and wirelessly connecting to the Internet or remotely located telephones;

a memory operatively connected to said cellphone;

a microprocessor provided in said cellphone and operatively connected to said
memory;

said microprocessor ~~including means~~ adapted for storing data to said memory that is received from at least one of the Internet or a remotely located telephone when said cellphone is wirelessly connected to the Internet or a remotely located telephone;

~~means~~ a display and a speaker provided with said housing and operatively connected to said microprocessor for reproducing data from at least one of said cellphone, memory or the Internet; and

said microprocessor ~~including means~~ adapted for automatically interrupting said reproducing of data during ~~at least one of a telephone call~~ from a one of the remotely located telephones ~~to or a telephone call from said cellphone.~~

94. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones:

a camera and a cellular telephone electrically connected and mounted in a portable housing of a size and weight for being handheld by a person, said cellular telephone having a microprocessor, a microphone, a speaker, a display panel, a dial pad and at least one of a wired or wireless earpiece and microphone combination for use by the person for wireless accessing the Internet and for placing and receiving person-to-person telephone calls to and from remotely located telephones;

~~a battery means in the housing for supplying electrical power to said camera and said cellular telephone;~~

~~means~~ said microprocessor adapted for activating said camera and microphone for capturing images and sounds within a range of said housing;

a memory in said housing operatively connected to said camera, and said cellular telephone ~~and said battery means~~ for storing said images captured by said camera and said sounds captured by said microphone;

~~means~~ said cellphone adapted for causing said stored images and said stored sounds to be transmitted by said cellular telephone to a remotely located telephone;

said memory ~~means~~ including an audio recorder mounted in said housing and having means for recording audible transmissions during the person-to-person telephone calls to and from said cellular telephone and for recording sounds within a range of said housing without a telephone call;

~~means~~ a display and a speaker provided with said portable housing for reproducing sounds and images from said memory ~~means~~ and the Internet;

at least one switch provided with the cellphone for downloading data from or uploading data to the Internet or downloading data to a computer or other devices; and

a switch ~~means~~ for separately operating at least one of (a) said ~~means~~ microprocessor adapted for activating said camera, (b) said microphone, (c) said cellular telephone, (d) said memory ~~means~~, (e) said ~~means~~ cellphone for causing said stored images and sounds to be transmitted, (f) said audio recorder, or (g) said ~~reproducing means~~ display and speaker.

95. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being handheld by a person and adapted for wirelessly accessing the Internet and placing and receiving person-to-person telephone calls to and from remotely located telephones;

said cellphone having a microphone, a speaker, a display, a camera, a microprocessor and a memory for storing data; and

at least one separate switch provided with the cellphone (1) for capturing real time moving images and sounds by said camera and microphone, (2) for reproducing real time moving images and sounds by said display and speaker, or (3) for downloading or uploading data between the cellphone and a computer and other devices.

96. (Previously Presented) The mobile entertainment and communication device of claim 24, 33, 46, 49, 51, 54, 64, 65, 70, 73, 75, 80, 88, 93, 94 or 95, further including a global positioning system provided in said housing and operatively connected to said cellphone, said global positioning system being activated by at least one of (1) a voice controlled dialing of a specific number of a remotely located telephone or the Internet, (2) dialing said specific number of a remotely located telephone or the Internet, or (3) an emergency call button for dialing said specific number of a remotely

located telephone or the Internet for transmitting the position of said cellphone to said remotely located telephone or the Internet.

97. (Currently Amended) The mobile entertainment and communication device of claim 1, 2, ~~16, 17~~, 24, 33, ~~38~~, 39, 46, 49, 54, 59, 60, 64, 70, 75, ~~84~~, 85, 86, 88, ~~90, 91~~ or 94, wherein the sounds, images or data being received, transmitted or reproduced comprises combined sound and image data received, transmitted or reproduced simultaneously.

98. (Currently Amended) The mobile entertainment and communication device of claim 24, 49, 59, 60, 88, ~~90, 91~~, 93, 94 or 95, wherein said memory includes a replaceable memory card receivable in a socket in said housing, said replaceable memory card having one of prerecorded data and no data.

99. (Currently Amended) The mobile entertainment and communication device of claim 1, 2, ~~16, 17~~, 24, 27, 33, 51, 54, 64, 65, 70, 73, 75, 80, ~~84~~, 85, 86, 88, ~~90, 91, 92~~ 93, 94 or 95, further including ~~sensor means~~ at least one sensor for detecting at least one of motion, sound, light, infrared, images, acceleration, deceleration, heat, smoke, carbon monoxide or poisonous gas and, when such is detected, activating said cellphone to dial at least one of dialing an emergency service number or recording sound or images.

100. (Currently Amended) The mobile entertainment and communication device of claim 1 or 2, ~~further including means~~ wherein said microprocessor is adapted for

interrupting said reproducing of data during a telephone call from a one of the remote telephones to or from said cellphone.

101. (Currently Amended) The mobile entertainment and communication device of claim 38, 59 or 90, further including means wherein said microprocessor is adapted for interrupting said displaying of images or emitting of sounds during a telephone call to or from said cellphone.

102. (Currently Amended) The mobile entertainment and communication device of claim 39 or 60, wherein said cellphone is further adapted including means for interrupting said playing of the stored sounds or displaying of the stored images during a telephone call to or from said cellphone.

103. (Currently Amended) The mobile entertainment and communication device of claim 70, 73, 75, ~~84~~ and 88, wherein said cellphone is further adapted including means for interrupting said receiving of sounds by each said earphone during a telephone call to or from said cellphone.

104. (Currently Amended) The mobile entertainment and communication device of claim 95, wherein said cellphone is further adapted including means for interrupting said (1) capturing real time moving images and sounds by said camera and microphone, (2) reproducing real time moving images and sounds by said display and speaker, and (3) downloading and uploading data between the cellphone and a computer and other devices during a telephone call to or from said cellphone.

105. (Currently Amended) The mobile entertainment and communication device of claim 1, 2, ~~46, 47, 38~~, 59, 60, 86, 88, ~~90, 94~~ or 95, further including a jack connection on said housing for a wired connection between said cellphone and a computer or other devices for downloading or uploading data from or to said cellphone.

106. (Currently Amended) The mobile entertainment and communication device of claim ~~38~~, 59, or 60, ~~90 or 94~~, further including separate switches provided with the housing (1) for capturing real time moving images and sounds by said camera and microphone, (2) for reproducing real time moving images and sounds by said display and speaker, and (3) for downloading or uploading data between the cellphone and a computer and other devices.

107. (Currently Amended) The mobile entertainment and communication device of claim 1, 2, ~~46, 47~~, 24, 33, ~~38~~, 46, 49, 51, 54, 59, 64, 65, 70, 73, 75, 80, ~~84~~, 85, 86, 88, ~~90~~, 93, 94 or 95, including ~~means for making a connection~~ a connector between said cellphone and at least one of a computer or other devices for downloading data from said cellphone to the computer or other devices.

108. (Currently Amended) A mobile entertainment and communication device for communicating with remotely located telephones, comprising:

a portable housing of a palm-held size;

a cellphone provided in said housing and ~~having means~~ adapted for selectively and wirelessly connecting to remotely located telephones or the Internet;

a memory provided in said housing and operatively connected to said cellphone;

a memory card socket provided in said housing for receiving a replaceable memory card with substantially the entire card positioned within said housing, said replaceable memory card being of a substantially rectangular shape having four corners with at least one corner of an irregular shape different than the other corners; and

said memory card socket having at least one corner of an irregular shape that will receive said irregularly shaped corner of said replaceable memory card but not the other corners of said replaceable memory card upon inserting said replaceable memory card into said replaceable memory card socket for properly orienting said card in said socket.

109. (Currently Amended) A mobile entertainment and communication device for communicating with remotely located telephones, comprising:

a portable housing of a palm-held size;

a cellphone provided in said housing and ~~having means~~ adapted for selectively and wirelessly accessing the Internet or remotely located telephones;

a memory provided in said housing and operatively connected to said cellphone, the memory including a replaceable memory card;

a memory card socket provided in said housing for receiving a the replaceable memory card with substantially the entire card positioned within said housing; and

said replaceable memory card having at least one hole for use in securing said card in said memory card socket.

110. (Currently Amended) The mobile entertainment and communication device of claim 11, 23, 53, 68, 70, 73, 84, 85, 86, ~~or 88~~ or 110; wherein said replaceable memory card is of a substantially rectangular shape having four corners with at least one corner of an irregular shape different than the other corners;

said socket has at least one corner of an irregular shape that will receive said irregular shaped corner of said replaceable memory card but not the other corners of said replaceable memory card upon inserting said replaceable memory card into said socket for properly orienting said card in said socket; and

said replaceable memory card socket is capable of receiving replaceable memory cards having different memory capacities.

111. (Currently Amended) A mobile entertainment and communication device for communicating with remotely located telephones and the Internet, comprising;

a portable housing of a palm-held size;

a cellphone provided in said housing and ~~having means~~ adapted for wirelessly connecting to the Internet and the remotely located telephones;

a memory provided in said housing and operatively connected to said cellphone said memory including a replaceable memory card;

a replaceable memory card socket provided in said housing for directly receiving a the replaceable memory card with substantially the entire memory card positioned within said housing and secured in the replaceable memory card socket; and

said replaceable memory card socket is provided with a spring bearing directly against the memory card when in place in the memory card socket for urging the replaceable memory card out of the socket.

112. (Canceled)

113. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being hand-held by a person and adapted for wirelessly accessing the Internet or placing and receiving person-to-person telephone calls to and from remotely located telephones, said cellphone having a microphone, a speaker, a camera and a memory for storing sounds captured by the microphone and still and moving images captured by the camera;

said memory including a replaceable memory card receivable in a replaceable memory card socket in said housing with substantially the entire memory card positioned within said housing and with either prerecorded data or no data on said replaceable memory card, said data including sounds and at least one of moving images or combined sounds and moving images;

said replaceable memory card having an irregularly shaped portion for mating with a similarly irregularly shaped portion of said replaceable memory card socket for properly ~~oriented~~ orienting said memory card in said memory card socket;

said memory card socket ~~includes means~~ adapted for accepting replaceable memory cards of different memory capacities;

~~means for activating~~ said cellphone adapted for wirelessly communicating with at least one of the Internet or the remotely located telephone and (1) causing at least one of the sounds captured by the microphone or the moving images captured by the camera to be transmitted to at least one of the remotely located telephone or the Internet or (2) causing at least one of sounds or images to be received by said cellphone from at least one of the remotely located telephone or the Internet;

at least one separate switch provided for controlling downloading or uploading data ~~to and from~~ and to the Internet or downloading data to a computer or other devices;

said cellphone having a display for displaying at least one of (1) said images captured by the camera, (2) images stored in the memory, including the replaceable memory card, or (3) images received from the remotely located telephone or the Internet;

~~at least one of a music player, with or without images, or a radio provided in said portable housing for providing entertainment; and~~

at least one of (1) an earphone and microphone with a wire for connecting to a jack on said cellphone or (2) a wireless earphone and microphone separate from said cellphone housing for transmitting sounds to and receiving sounds from said cellphone, each said earphone usable for receiving sounds from at least one of the remotely located telephone, the Internet, ~~the~~ a music player, ~~the~~ a radio or the memory, including the replaceable memory card; and

a control ~~means provided in said housing~~ switch for causing at least one of playing sounds, controlling sound volume, skipping portions of sounds or data, equalizing sounds, or balancing sounds provided to at least one of said cellphone speaker or each said earphone.

114. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being hand-held by a person and adapted for wirelessly accessing the Internet or placing and receiving person-to-person telephone calls to and from remotely located telephones, said cellphone having a microphone, a speaker and a memory for storing sounds captured by the microphone, the housing having a memory card socket;

said memory including a replaceable memory card receivable in a said socket ~~in said housing~~ and with either prerecorded data or no data on said replaceable memory

card, said data including sounds and at least one of moving images or combined sounds and moving images;

said replaceable memory card having at least one corner of an irregular shape different than other corners of said memory card;

said replaceable memory card socket having at least one corner of an irregular shape that ~~will receiving~~ receives said irregularly shaped corner of said replaceable memory card;

~~means for activating~~ said cellphone adapted for wirelessly communicating with at least one of the Internet or the remotely located telephone and causing at least one of (1) transmitting the sounds captured by the microphone to at least one of the remotely located telephone or the Internet or (2) receiving the sounds by said cellphone from at least one of the remotely located telephone or the Internet;

at least one separate switch provided with said cellphone for controlling downloading or uploading data ~~to and from~~ and to the Internet or downloading data to a computer or other devices;

~~at least one of a music player, with or without images, or a radio provided in said portable housing for providing entertainment;~~

at least one of (1) an earphone and microphone with a wire for connecting to a jack on said cellphone or (2) a wireless earphone and microphone separate from said cellphone housing for transmitting sounds to and receiving sounds from said cellphone,

each said earphone usable for receiving sounds from at least one of the remotely located telephone, the Internet or the memory, including the replaceable memory card; and

~~control means~~ a control switch provided in said housing for causing at least one of playing sounds, controlling sound volume, skipping portion of sounds or data, equalizing sounds or balancing sounds provided to at least one of said cellphone speaker or each said earphone.

115. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being handheld by a person and adapted for wirelessly accessing the Internet or placing and receiving person-to-person telephone calls to and from remotely located telephones, said cellphone having a microphone, a speaker, ~~and~~ a memory for storing data, said housing having a memory card socket;

said memory including a replaceable memory card directly receivable in a said memory card socket in said housing and with either prerecorded data or no data on said replaceable memory card, with substantially the entire replaceable memory card directly positioned within the cell phone and including a memory card engagement device and a spring in direct contact with the replaceable memory card for urging the replaceable memory card out of the socket upon release of the memory card engagement device;

~~said replaceable memory card having at least one corner of an irregular shape different than other corners of said memory card;~~

~~said memory card socket having at least one corner of an irregular shape that will receive said irregularly shaped corner of said replaceable memory card,~~ said replaceable memory card socket having means adapted for accepting replaceable memory cards of different memory capacities;

at least one separate switch provided with said cellphone for controlling uploading or downloading data to or from the Internet or downloading data to a computer or other devices;

~~means for activating said cellphone and operable for causing at least one of (1) wirelessly transmitting and receiving data to and from a remotely located telephone, (2) uploading or downloading data to and from the Internet, (3) reproducing data from said memory, including said replaceable memory card, or (4) reproducing data currently being received by said cellphone;~~

said data including at least one of still images, moving images, sounds, words, text or audio-visual performances, including the combined sounds and images of such performances; and

at least one of (1) an earphone and microphone with a wire for connecting to a jack on said cellphone or (2) a wireless earphone and microphone separate from said cellphone housing for transmitting sounds to and receiving sounds from said cellphone,

each said earphone usable for receiving sounds from at least one of the remotely located telephone, the Internet or the memory, including the replaceable memory card; and

~~control means~~ a control switch provided in said housing for causing at least one of playing sounds, controlling sound volume, skipping portions of sounds or other data, equalizing sounds or balancing sounds provided to at least one of said cellphone speaker or each earphone.

116. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and a remotely located telephone, comprising:

a housing of palm-held size;

a cellphone provided in said housing and adapted for wirelessly connecting to the Internet or remotely located telephones, said cellphone having a memory;

said cellphone memory including a replaceable memory card ~~with at least one corner having an irregular shape;~~

a replaceable memory card socket provided in said housing for directly receiving said replaceable memory card with substantially the entire card ~~position~~ positioned within said housing and secured in the replaceable memory card socket, ~~said memory card socket having at least one corner of an irregular shape that will receive said irregularly shaped corner of said replaceable memory card;~~

a memory card engagement device and a spring in direct contact with the replaceable memory card for urging the replaceable memory card out of the socket upon release of the memory card engagement device;

a microprocessor provided in said cellphone and operatively connected to said memory and said replaceable memory card;

said microprocessor ~~including means~~ adapted for storing data to said memory or replaceable memory card that is received from the Internet or a remotely located telephone when said cellphone is wirelessly connected to the Internet or remotely located telephone;

means a display and a speaker provided with said housing and operatively connected to said microprocessor for reproducing data from at least one of said cellphone, said memory, said replaceable memory card or the Internet, ~~said means for reproducing data includes a display panel for displaying images, said reproducing means also including means for~~ said cellphone further adapted for at least one of playing sounds, controlling sound volume, skipping a portion of sounds or images and data, or equalizing sounds;

at least one separate switch provided with said cellphone for controlling downloading data or uploading data ~~to and from~~ and to the Internet or downloading data to a computer or other devices;

at least one of (1) an earphone and microphone with a wire for connecting to a jack on said cellphone or (2) a wireless earphone and microphone separate from said cellphone housing for transmitting sounds to and receiving sounds from said cellphone, each said earphone usable for receiving sounds from at least one of the remotely located telephone, the Internet, a music player, with or without images, a radio, said memory, or said prerecorded replaceable memory card; and

said data including at least one of still images, moving images, sounds, words, text, or audio-visual performance, including the combined sounds and images of such performances.

117. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a housing of a palm-held size;

a cellphone provided in said housing ~~and having means~~ adapted for selectively and wirelessly connecting to the Internet or remotely located telephones, said housing including a replaceable memory card socket;

a memory operatively connected to said cellphone and including a replaceable memory card receivable in a said memory card socket in said housing, said replaceable memory card having either prerecorded data or no data;

said replaceable memory card socket having at least one corner of an irregular shape that will receive at least one irregularly shaped corner of said replaceable memory card;

a microprocessor provided in said cellphone and operatively connected to said memory;

said microprocessor ~~including means~~ adapted for storing data to said memory that is received from at least one of the Internet or a remotely located telephone when said cellphone is wirelessly connected to the Internet or a remotely located telephone;

~~means~~ a display provided with said housing and operatively connected to said microprocessor for at least one of (1) simultaneously reproducing data received from the internet as data is received, or (2) reproducing data from at least one of said cellphone or memory;

at least one separate switch provided with said cellphone for controlling uploading data or downloading data to and from the Internet or downloading data to a computer or other devices;

~~at least one of a music player, with or without images or data, or an a radio provided in said housing for providing entertainment;~~

at least one of (1) an earphone and microphone with a wire for connecting to a jack in said cellphone or (2) a wireless earphone and microphone separate from said cellphone housing for transmitting sounds to and receiving sounds from said cellphone,

each said earphone usable for receiving sounds from at least one of the remotely located telephone, the Internet, ~~the~~ a music player, ~~the~~ a radio or the memory, including the replaceable memory card; and

a control ~~means~~ switch provided in said housing for causing at least one of playing sounds, controlling sound volume, skipping portions of sounds, equalizing sounds or balancing sounds provided to at least one of said cellphone speaker or each said earphone.

118. (Canceled)

119. (Currently Amended) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a housing of a palm-held size;

a cellphone provided in said housing and ~~having means~~ adapted for selectively and wirelessly connecting to the Internet or remotely located telephones, the housing including a memory card socket;

a memory operatively connected to said cellphone and including a replaceable memory card receivable in a said memory card socket in said housing, said replaceable memory card having either prerecorded data or no data;

said memory card socket having at least one corner of an irregular shape that will receive at least one irregularly shaped corner of said replaceable memory card;

a microprocessor provided in said cellphone and operatively connected to said memory;

said microprocessor ~~including means~~ adapted for storing data to said memory that is received from at least one of the Internet or a remotely located telephone when said cellphone is wirelessly connected to the Internet or a remotely located telephone;

at least one separate switch provided with said cellphone for controlling uploading data or downloading a data to and from the Internet or downloading data to a computer and other devices;

~~means provided with said housing and operatively connected to said~~ microprocessor adapted for reproducing data from at least one of said cellphone, said memory or the Internet, said reproducing of data including at least one of moving images or combined sound and moving images;

a global positioning system provided in said housing and operatively connected to said microprocessor;

said cellphone having ~~means~~ a dialer for dialing a remotely located telephone or the Internet and activating said global positioning system for transmitting the position of said cellphone to the remotely located telephone or the Internet;

~~at least one of a music player, with or without images, or a radio provided in said portable housing for providing entertainment; and~~

~~a control means~~ switch provided in said housing for causing at least one of playing sounds, controlling sound volume, skipping portions of sounds or other data, equalizing sounds or balancing sounds provided ~~by said at least one of said music player or radio~~ through said cellphone.

120. (Currently Amended) A mobile entertainment and communication device for communicating with remotely located telephones, comprising:

a cellphone ~~in~~ having a portable housing of a size and weight for being handheld by a person and adapted for placing and receiving person-to-person telephone calls to and from remotely located telephones;

said cellphone having a microphone, a speaker and a memory, said memory including a replaceable memory card;

~~at least one of a music player, with or without images, or a radio provided in said housing for providing entertainment;~~

at least one of (1) an earphone and microphone with a wire for connecting to a jack on said cellphone or (2) a wireless earphone and microphone separate from said cellphone housing for transmitting sounds to and receiving sounds from said cellphone, each said earphone usable for receiving sounds from at least one of the remotely located telephone, the Internet, ~~the~~ a music player, ~~the~~ a radio or the memory, including the replaceable memory card;

a control means switch provided in said housing for causing at least one of playing sounds, controlling sound volume, skipping portions of sounds or other data, equalizing sounds or balancing sounds provided to at least one of said cellphone speaker or each said earphone;

a memory card socket provided in said housing for receiving said replaceable memory card with substantially the entire card positioned within said housing and secured in the memory card socket, said memory card socket having at least one corner of an irregular shape that will receive at least one irregularly shaped corner of said replaceable memory card; and

said replaceable memory card having at least one hole for use in securing said replaceable memory card in said memory card socket.

121. (Canceled)

122. (Currently Amended) In a mobile entertainment and communication device for communicating with remotely located telephones by a cellphone, a replaceable memory card for replaceably installing directly in the cellphone, said memory card ~~having a flat, rectangular shape with at least one corner having an irregular shape that is different than the other corners~~ exhibiting asymmetry for causing proper orientation of said memory card in the cellphone, said memory card having at least one ~~hole~~ engagement feature for use in securing the memory card in the cellphone, ~~and said memory card having either prerecorded data or no data~~ wherein said replaceable

memory card has prerecorded data comprised of either combined sounds and text or combined sounds and moving images or no data.

123-124. (Canceled)

125. (Previously Presented) The mobile entertainment and communication device of claim 46 or 49 wherein there are at least two said sensors for detecting at least two of motion, sound, light, infrared, images, acceleration, deceleration, heat, smoke, carbon monoxide or poisonous gas as the activating characteristic.

126. (Previously Presented) The mobile entertainment and communication device of claim 46 or 49 wherein there are at least three said sensors for detecting at least three of motion, sound, light, infrared, images, acceleration, deceleration, heat, smoke, carbon monoxide or poisonous gas as the activating characteristic.

127. (Currently Amended) A mobile entertainment and communication device for communicating with remotely located telephones, comprising:

a housing of a palm-held size;

a cellphone provided in said housing and adapted for selectively and wirelessly accessing the remotely located telephones and the Internet;

said cellphone having a microphone, a speaker, a camera, a display, a memory and a microprocessor provided in said housing;

a sensor operatively connected to said microprocessor for detecting at least one activating characteristic of sound, motion, light, infrared or images and, upon such

detection, activating said cellphone for capturing at least one of sounds or images, said cellphone then either recording to said memory or transmitting telephonically to a remotely located telephone or the Internet the captured said at least one of sounds and images;

~~means operatively connected to said cellphone~~ adapted for hands-free operation of said cellphone comprising at least two of (1) an earphone and microphone with a wire for connecting to said cellphone, (2) a wireless earphone and microphone separate from said housing ~~with means~~ adapted for communicating with said cellphone, (3) a speaker phone operating ~~means~~ with said cellphone, (4) a voice control operating ~~means~~ with said cellphone, or (5) automatic dialing of said cellphone to at least one of a pre-selected number or the Internet upon said sensor detecting the activating characteristic; and

at least one separate switch provided with said housing for starting the reproduction of data at said housing and controlling that reproduction by at least one of skipping portions of the data, equalizing sounds or controlling the volume of sounds, said data including at least one of still images, moving images, sounds, words, text, visual entertainment, or audio visual data combining sounds and images.

128. (Previously Presented) The mobile entertainment and communication device of claim 127 wherein there are at least two said sensors for detecting at least two

of motion, sound, light, infrared, images, acceleration, deceleration, heat, smoke, carbon monoxide or poisonous gas as the activating characteristic.

129. (Previously Presented) A mobile entertainment and communication device for communicating with remotely located telephones, comprising:

a housing of a palm-held size;

a cellphone provided in said housing and ~~having means~~ adapted for selectively and wirelessly accessing the remotely located telephones and the Internet;

said cellphone having a microphone, a speaker, a camera, a display, a memory and a microprocessor provided in said housing;

~~means for activating~~ said cellphone adapted for causing the recording of at least one of (1) real time moving images or (2) combined real time sounds and moving images simultaneously;

at least one separate switch provided with said housing and cellphone for causing at least one of (1) recording real time sounds and moving images simultaneously, (2) reproducing at the housing sounds and moving images simultaneously, or (3) downloading at least one of still images, moving images, sounds or combined moving images and sounds to a computer, television or recording device;

a jack provided on said housing and operatively connected to said microprocessor for receiving a wire having an earphone for reproducing sound;

said display operatively connected to said microprocessor for reproducing the images; and

said memory recording the sounds and the images, including combined sounds and moving images, for allowing the reproduction of the sounds and images by the cellphone or by at least one of a computer, a television or a reproducing device.

130. (Currently Amended) The mobile entertainment and communication device of claim 129, further comprising, ~~means for~~ voice controlled dialing of said cellphone of pre-selected telephone numbers, including 911, for automatically transmitting at least sounds from the cellphone.

131. (Previously Presented) The mobile entertainment and communication device of claim 129, further comprising, at least one sensor in said housing operatively connected to said microprocessor for activating said microphone and cellphone upon said sensor sensing at least one activating characteristic of sounds, motion, light, infrared or images; and

upon said cellphone being activated by said sensor sensing an activating characteristic, said cellphone automatically causing at least one of (1) dialing a pre-selected telephone number and transmitting the sounds captured by said microphone to a remotely located telephone or (2) recording on said memory the sounds captured by said microphone.

132. (Previously Presented) The mobile entertainment and communication device of claim 129, further comprising, at least one sensor in said housing operatively connected to said microprocessor for activating said microphone, said camera and said cellphone upon said sensor sensing at least one activating characteristic of sounds, motion, light, infrared or images; and

upon said cellphone being activated by said sensor sensing an activating characteristic, said cellphone automatically causing at least one of (1) dialing a pre-selected telephone and transmitting the sounds captured by said microphone and images captured by said camera to a remotely located telephone or (2) recording on said memory the sounds captured by said microphone and images captured by said camera.

133. (Previously Presented) The mobile entertainment and communication device of claim 131 or 132, wherein there are at least two said sensors for detecting at least two of sounds, motion, light, infrared or images as the activating characteristic.

134-136. (Canceled)

137. (Currently Amended) The mobile entertainment and communication device of claim 24 or 136, further comprising a separate switch on said housing for causing the downloading or uploading of data.

138. (Currently Amended) A mobile entertainment and communication device, comprising:

a housing of a palm-held size;
a cellphone provided in said housing and adapted for wirelessly accessing
remotely located telephones;
said cellphone having a memory;
a jack on said housing operatively connected to said cellphone and memory; and
a connection wire with a plug on one end for connecting to said jack and ~~means~~
a connector on the other end for connecting to at least one of a personal computer, a
television or other devices for down or up loading data including sounds and at least
one of moving images or combined sounds and moving images simultaneously.

139. (Canceled)

140. (Currently Amended) A mobile entertainment and communication device
comprising:

a handheld cell phone for telephone calls including a microphone, a speaker, a
display, a camera, a memory, a microprocessor, an emergency call function, ~~at least~~
~~one of (1) voice control dialing a pre-selected number, (2) manually dialing an~~
~~emergency number, (3) sensor detected dialing a pre-selected emergency number or~~
~~(4) an emergency button that dials a pre-selected number activating the emergency call~~
~~function, and means,~~ said microprocessor adapted for causing operation of at least one
of the camera or the microphone upon activation of the emergency call function for

transmitting sound and at least one of ~~sounds~~, still images, moving images, or
combined sounds and moving images ~~or location information~~ by telephone call.

141. (Currently Amended) A mobile entertainment and communication device
comprising:

a handheld cell phone for telephone calls ~~and wireless access to the Internet~~ and
including a microphone, a speaker, a display, a camera, a microprocessor, a memory,
an emergency call function, ~~at least one of (1) voice control dialing a pre-selected
number, (2) manually dialing an emergency number, (3) sensor detected dialing a pre-
selected number or (4) an emergency button~~ that dials a pre-selected emergency
number activating the emergency call function, ~~and means~~ said microprosser adapted
for causing operation of at least one of the camera or the microphone upon activation of
the emergency call function for transmitting sound and at least one of ~~sounds~~, still
images, moving images, or combined sounds and moving images ~~or location
information to the Internet or to~~ an emergency telephone.

142. (Currently Amended) ~~The mobile entertainment and communication device~~
In the mobile entertainment and communication device for communicating with remotely
located telephones by a cellphone of claim 448 or 122, the engagement feature
including at least one hole extending at least partially through the memory card, the
prerecorded data being selected from the group consisting of audio, moving images,
audio with fixed images or combined ~~sounds~~ audio and moving images or no data.

143. (Currently Amended) The mobile entertainment and communication device of claim 73, 109,~~112~~, or 120, the at least one hole extending at least partially through said memory card, said memory card including prerecorded data being selected from the group consisting of audio, moving images, audio with fixed images or combined sounds audio and moving images or no data.

144. (New) A mobile entertainment and communication device for communicating with remotely located telephones, comprising:

a portable housing of a palm-held size including an engagement element;

a cellphone provided in said housing and adapted for selectively and wirelessly accessing the Internet or remotely located telephones;

a memory provided in said housing and operatively connected to said cellphone, said memory including a replaceable memory card having a shape exhibiting asymmetry for causing proper orientation of said memory card in said housing, at least one engagement feature for receiving said engagement element and prerecorded data comprised of either combined sounds and text or combined sounds and moving images or no data;

a memory card socket in said housing for directly receiving said replaceable memory card with substantially the entire card positioned within said housing.

145. (New) A communication system comprising:

a handheld cell phone for telephone calls and wireless access to the Internet and including a microphone, a speaker, a display, a memory with a replaceable memory card, a microprocessor and a memory card socket for receiving said replaceable memory card, said memory card and memory card socket having complementary shapes exhibiting asymmetry for unique orientation of said memory card in said socket with substantially the entire memory card positioned directly within said socket;

at least one sensing system provided and operatively connectable to said microprocessor; said sensing system having at least one of (1) a camera for capturing still or moving images, (2) a microphone for capturing sounds capable of being sequenced with said camera or (3) at least one sensor for detecting at least one of sound, images, motion, light, infrared, heat, smoke, carbon monoxide or poisonous gas, said microprocessor providing operation for capturing at least one of moving images or combined sound and moving images, and providing operation for at least one of (1) reproducing moving images and sounds through said display and said speaker or (2) loading data from or to said cell phone to or from one or more of the Internet or an electronic device.

146. (New) A mobile entertainment and communication device comprising:

a handheld cell phone for telephone calls and wireless access to the Internet and including a microphone, a speaker, a display, a camera, a memory and a microprocessor, said microprocessor providing operation for selectively (1) capturing

moving images, sounds or simultaneous sounds and moving images, (2) reproducing moving images by said display and sounds by said speaker separately or simultaneously, (3) loading data including sounds and moving images to and from the Internet or (4) loading data including sounds and moving images between said cell phone and an electronic device;

a remote wired or wireless earphone, said microprocessor providing operation for directing sounds to at least one of said earphone or said speaker from the telephone calls, said microprocessor further providing operation for handling data including sounds and moving images from at least one of said microphone, camera, internet or memory, said microprocessor further providing operation for causing at least one of playing sounds, controlling sound volume, skipping portions of the data, equalizing sounds or balancing sounds, said microprocessor further providing operation for automatically interrupting the playing of sound and images upon receiving a telephone call.

147. (New) The mobile entertainment and communication device of claim 70-78, 80, 83, 85-86, 88-89, 113-114, 116-117, 119, 120 or 146, said cellphone further including a radio receiver in said cellphone housing playable through said speaker or a wired or wireless earphone.

148. (New) A mobile entertainment and communication device for communicating with the Internet and remotely located telephones, comprising:

a hand-held cellphone for wirelessly accessing the Internet or placing and receiving phone calls to and from the remotely located telephones;

said cellphone having a microphone, a speaker, a display, a microprocessor, a wired or wireless earphone and a memory including a replaceable memory card;

said microprocessor controlling the reproduction of continuing sounds and continuing moving images, separately or simultaneously, by directing said continuing sounds and continuing moving images appropriately to said wired or wireless earphone and said display from at least one of (1) said memory or replaceable memory card, (2) the Internet or the remote telephones or (3) radio broadcasting.

149. (New) A mobile communication device for communicating with the Internet and remotely located telephones, comprising:

a hand-held cellphone for wirelessly accessing the Internet or placing and receiving phone calls to and from the remotely located telephones;

said cellphone having a microphone, a speaker, a display, a camera, a microprocessor and a memory;

said microprocessor providing operation for capturing, storing or transmitting to a pre-selected address on the Internet or a pre-selected one of the remotely located telephones sounds and at least one of moving images or combined sounds and moving images activated by at least one of (1) voice, (2) sensor detection or (3) single button actuation.

150. (New) A mobile entertainment and communication device for communicating with remotely located telephones comprising:

a hand-held cellphone including a microphone, a speaker, a camera, memory, a microprocessor and at least three of (1) a wired remote microphone and earphone, (2) a wireless microphone and earphone, (3) a speaker phone or (4) voice control activation, said microprocessor providing operation for selectively causing at least one of (1) capturing combined sounds and moving images by microphone and camera, (2) transmitting stored combined sounds and moving images to a pre-selected one or more of the remote telephones or (3) transmitting currently captured combined sounds and moving images to a pre-selected one or more of the remote telephones by voice controlled cellphone activation.
